When this document forms part of a deed

This document should be read with all the documents forming the Project Deed.

When this document does not form part of a deed

This copy is not a controlled document. Observe the Notice that appears on the first page of the copy controlled by RMS. A full copy of the latest version of the document is available on the RMS Internet website: http://www.rms.nsw.gov.au/business-industry/partners-suppliers/specifications/index.html

BASE SPECIFICATION

This document is based on Specification RMS 3258 Edition 8 Revision 0.
RMS SPECIFICATION D&C 3258
AGGREGATE PRECOATING AGENT
(FOR BITUMEN)

1 SCOPEx

This Specification sets out the requirements for precoating agents for aggregate used in spray sealing with bitumen class 170. Precoating agents may be either ready for use or in a concentrated form to be blended before use.

2 STRUCTURE OF THE SPECIFICATION

This Specification includes a series of annexures that detail additional requirements.

2.1 (NOT USED)

2.2 SCHEDULE OF IDENTIFIED RECORDS

The records listed in Annexure 3258/C are Identified Records for the purposes of Specification RMS D&C Q6 Annexure Q/E.

2.3 (NOT USED)

2.4 REFERENCED DOCUMENTS AND DEFINITIONS

Standards, specifications and test methods are referred to in abbreviated form (e.g. AS 2350). For convenience, the full titles are given in Annexure 3258/M.

The term “the Supplier” means the supplier of the product covered by the scope of this Specification.

3 (NOT USED)

4 SUPPLIER’S QUALITY MANAGEMENT SYSTEM

The Supplier must establish and maintain a Quality Management System complying with AS/NZS ISO 9001 as a means of ensuring that the product conforms to this Specification.

Provide evidence verifying compliance with this Clause.
5 MATERIAL REQUIREMENTS

5.1 GENERAL

Ready for use precoating agents may be cutback bitumen grade AMC00 complying with AS 2157 or other proprietary materials.

5.2 SAFETY

The material must not contain any components which, when handled in accordance with approved work practices (such as those contained in “RMS Sprayed Sealing Guide” and “Austroads Guide to Pavement Technology Part 4B”), will cause the worker to be exposed to harmful substances above the legal limit concentration.

5.3 HOMOGENEITY OF LIQUID PRECOAT

The precoating agent after agitation and when ready for use must be homogeneous and remain free from skinning precipitation or any other deterioration for 72 hours (Test Method RMS T590).

5.4 INITIAL ADHESION

When tested in accordance with Test Method RMS T238 with Class 170 bitumen and each of the four aggregates: Microgranite (ex Mugga 1 Quarry, Canberra), Basalt (ex Peats Ridge), Quartzite (ex Marrangaroo, Lithgow) and Nepean River Gravel (ex Emu Plains) under the following four surface conditions:

(i) clean and dry,
(ii) dusty,
(iii) saturated surface dry,
(iv) saturated surface wet,

the percentage stripped must not exceed 10% with any combination of aggregate and surface condition listed above.

5.5 RESISTANCE TO STRIPPING

When tested in accordance with Test Method RMS T230 using Class 170 bitumen and the four aggregates under the four surface conditions stated in Clause 5.4, the percentage stripped must not exceed 10% for any combination of aggregate and surface condition listed in Claire 5.3.

5.6 KEEPING QUALITIES

The precoating agent must be able to comply with Clauses 5.3 to 5.5 after storage in the temperature range 4°C to 40°C in unopened containers for 6 months from the date of despatch by the Supplier.

5.7 CONCENTRATION OF ACTIVE COMPONENT

Provide details of a reproducible laboratory test which will allow the concentration of the active component of the material to be determined. Specify an average value for the concentration of the
6 PRODUCT CERTIFICATION

Provide a certificate of compliance verifying that the precoating agent complies with Clause 5 of this Specification, together with test results reported on NATA endorsed test documents.

The certification must relate only to the formulation of the product on which the tests were carried out. New certification will be required every five (5) years or whenever a change in product formulation is made.

7 IDENTIFICATION OF CONTAINERS

Mark each container clearly and durably to show the following information:

(a) name of Supplier;
(b) trade name of the product (if applicable);
(c) product reference number or identification number;
(d) batch number or date of manufacture; and
(e) “Use By” date.

Provide a copy of the certificate of compliance and Safety Data Sheet with each delivery.

8 INFORMATION TO BE PROVIDED BY SUPPLIER

Provide a Materials Data Sheet which include the following information:

(a) chemical and physical properties;
(b) recommended application rate;
(c) recommended diluent and rate of dilution, where applicable;
(d) recommended method of mixing;
(e) storage life of precoat before applying to aggregate, without precipitation or other deterioration;
(f) effective life of precoat when applied to aggregate and stockpiled.
ANNEXURES 3258/A TO 3258/B – (NOT USED)

ANNEXURE 3258/C – SCHEDULE OF IDENTIFIED RECORDS

Refer to Clause 2.2.

The records listed below are Identified Records for the purposes of RMS D&C Q6 Annexure Q/E.
