The most recent revision to Test method T313 (other than minor editorial changes) are indicated by a vertical line in the margin as shown here.

Test method T313

Bleeding of concrete

1. Scope

This test method sets out the procedure for determining the relative quantity of mixing water that will bleed from a sample of freshly mixed concrete under the conditions of the test. The method only applies to concrete in which the maximum size of the aggregate is 40 mm or less.

2. Test Requirements, Procedure and Reporting

The method is identical with the procedure described in AS 1012.6 - Method for the Determination of Bleeding Concrete.
