Test method T317

Mass per unit volume of hardened concrete
(Water displacement method)

1. Scope
   This test method sets out the procedure for determining the mass per unit volume of a hardened concrete specimen by water displacement.

   This method is applicable to either regular or irregular shaped specimens and is also applicable to capped specimens provided the mass per unit volume of the cap does not differ from that of the specimen by more than 25 percent and the cap complies with the requirements of AS 1012.9.

2. Test Requirements, Procedure and Reporting
   The method is identical with the procedure described in Section 2 of AS 1012.12 - Method for the Determination of Mass per Unit Volume of Hardened Concrete.
