FOUNDATIONS TO BE INSTALLED FOR DARLINGTON DRIVE OVERPASS

Federal Member for Richmond Justine Elliot and State Member for Tweed Geoff Provest have announced that the Banora Point upgrade project team will carry out work near the Darlington Drive roundabout to build a temporary retaining wall in preparation for installing the foundations for the new northbound off ramp, which will pass over Darlington Drive.

This work will be carried out for a total of four days between Thursday 10 and Friday 18 November.

“When the work to build the temporary retaining wall is complete, the foundations for the new off ramp will be driven into the soil,” Justine said.

Work to lay the foundations will be carried out for a total of four days between Monday 14 and Friday 25 November.

“Installing foundations of this kind can create increased levels of noise and vibration, which is why the work will be carried out only during normal work hours between 7am and 6pm,” Geoff said.

“The project team will take action to reduce noise and vibration from the activity, including stopping work for breaks and carrying out regular noise and vibration monitoring.”

“Exactly which days the work will be carried out on will not be known in advance, because the work depends on weather and the progress of other stages of the project,” Geoff said.

The Banora Point upgrade project is jointly funded with $347 million from the Federal government and $12 million from the NSW State government.

For further information, comments or concerns about the work, please contact the toll-free community relations line on 1800 012 611, visit the RTA’s Pacific Highway website at www.rta.nsw.gov.au/pacific, or visit the Banora Point upgrade information centre at the Banora Point Upgrade Alliance site office on Link Road, east of the Darlington Drive roundabout.
