Member for Wollondilly, Jai Rowell today announced a new point to point camera detecting speeding heavy vehicles is now operating on Picton Road.

"The technology aims to slow speeding heavy vehicles and make NSW highways and country roads safer for everyone," Jai said.

"The new point to point cameras measure the time it takes a heavy vehicle to travel between two points and then calculates the vehicle's average speed.

"If the average speed is higher than the speed limit for the length of road, the driver will be penalised for speeding.

"Point to point enforcement is about improving both the safety of heavy vehicle drivers and other road users by reducing heavy vehicle speeding but is not used for light vehicles.

"Speed is often the cause of fatal crashes and point to point technology will help tackle this problem.

"To help change driver behaviour there will be an initial warning period where warning letters instead of infringements will be issued to speeding heavy vehicle drivers.

"Warning signs will also be posted at the start and end of the point to point enforcement length," he said.

"There are now 19 point to point camera locations operating on the Pacific, Federal, Oxley, New England, Hume, Golden and Great Western highways," said Jai.

A full list of the 25 proposed point to point enforcement lengths can be found at www.rms.nsw.gov.au.
