New England Highway Bypass of Scone
Project update – February 2019

The New England Highway bypass of Scone will improve traffic flow, travel times and safety for road users.

Recently completed work

Earthworks
Earthworks and the delivery of fill material started in July and is progressing well. A total of 250,000m$^3$ is required for the bypass, with around 80 per cent of this already delivered to site.

Bridge girder deliveries
We’ve delivered over 150 of the 172 bridge girders required for the project. The girders are up to 27 metres long and weigh around 45 tonnes. Deliveries will continue until March.
Bridge piling

Bridge piling work is now completed. The next stage of bridge work is the construction of the bridge piers.

Upcoming work

Construction activities planned in the next two months include:

- Continued trucking of fill material to site
- Concrete pouring of the two piers for the bridge across the Northern Rail Line
- Construction of U-turn facility at the southern approach
- Lifting girders into place for the Kelly Street loop and rail bridge.

Work hours

We are continuing to work between 7am and 6pm from Monday to Friday and between 8am and 1pm on Saturday.
