Alexandria to Moore Park Connectivity Upgrade – Consultation report now available

The NSW Government is investigating key intersection improvements to reduce travel time, improve connectivity and support urban renewal on the southern outskirts of the CBD.

Thank you for your feedback on the display of the preliminary concept design for the proposed Alexandria to Moore Park Connectivity Upgrade in June and July 2017.

The project team received more than 800 comments which are being used to review features of the design including length of clearway operating hours, requirements for medians, options that reduce property acquisition and impacts on trees, and pedestrian and cycling access.

These changes will feature in the revised design, which will be displayed in coming months with the projects Review of Environmental Factors.

The majority of the comments were submitted via the new online mapping tool, with comments focusing on six key issues:

- property and access
- parking
- the environment
- public transport
- traffic including lane configurations
- clearways.

To read what your community had to say about the preliminary concept design and how this was considered by the project team, the Alexandria to Moore Park Connectivity Upgrade consultation report is now available on our project website and can be viewed by visiting rms.nsw.gov.au/a2mp

What happens next?

The project team is now updating the design following the consultation period and preparing a Review of Environmental Factors.

The Review of Environmental Factors will examine the potential impacts of the proposed upgrade and outline measures to reduce and manage the impacts of the project.
