How to affix your labels

All electric, hybrid and hydrogen vehicles manufactured or modified after 1 January 2019 are now legally required to have a safety label fixed to the front and rear number plates. Motorcycles require one label on the rear number plate.

It is the registered operator’s responsibility to ensure the labels are affixed correctly and clearly displayed at all times. Penalties, including a defect notice and/or fine, may apply from 1 July 2020 to vehicles which do not comply.

Please affix the enclosed labels directly on to the number plate, not to the number plate frame or cover.

Instructions for self-adhesive use:

1. Ensure the number plate surface is clean before affixing label
2. Remove backing from label
3. Affix to any corner of the number plate or above or below dots between character spaces (see examples below)
4. Ensure the letters on the label are in an upright position
5. Ensure it does not wholly or partly obscure any characters on the number plate
6. Ensure it does not wholly or partly obscure the state of issue on the number plate
7. Repeat process for both number plates

Instructions for pop rivet/screw/bolt on:

1. Align labels with pre-existing holes in number plate and drill/screw/bolt label in place
2. Ensure the letters on the label are in an upright position
3. Ensure it does not wholly or partly obscure any characters on the number plate
4. Ensure it does not wholly or partly obscure the state of issue on the number plate
5. Repeat process for both number plates
