KANGAROO VALLEY ROAD OVERBRIDGE

JULY 2014

Artist's impression – view of bridge from Princes Highway looking south

- The Kangaroo Valley Road overbridge will be built using a cast-in-place 'voided slab' technique.
- The bridge will be approximately 50 metres long and will be 19 metres wide incorporating shared pedestrian/cycle paths in both directions.
- The bridge will carry one lane of traffic in each direction.

Changes from Approved Concept Design:

To improve visibility and safety for motorists, as well as visual amenity, a number of changes are proposed which will be determined in consultation with the community.

- Anti-throw screens to tie in with the look and feel of the David and Alexander Berry Memorial.

- Bridge abutments and walls made from precast concrete panels finished with a sandstone finish.
- Landscaping options for the shared paths over the bridge are being considered and will be further developed as part of the detailed design.
