Lansdowne Bridge replacement, Goulburn

Project update - June 2018

The Australian and NSW governments are jointly funding the upgrade and replacement of the Lansdowne Bridge over the Mulwaree River, Goulburn

What has happened to date?

Tenders for construction of the new bridge have closed.

Final preparations to make Lansdowne Bridge ready for safe demolition were completed including:

- A 20 tonne steel frame was built in the waterway to prop up the old bridge for removal
- A crane pad has been built onsite to allow a large crane access to remove the bridge
- New underground power and data cables have been installed to replace existing overhead powerlines
- Temporary street lighting has been installed along Bungonia Road until permanent street lights are installed.

Final demolition of the existing bridge

- The bridge was removed in sections using a large crane in early June
- The old bridge timbers are being treated off-site and will be reused by industry.

What is happening in the next three months?

Building the new bridge and road approaches

- The contract for the construction of the new bridge and road approaches is expected to be awarded in June 2018
- The successful contractor is expected to start work on the new bridge in July 2018
- A map of the new bridge design and features is provided over the page.

Heritage interpretation

- We will continue planning the heritage interpretation strategy to ensure the heritage of the old bridge, including previous crossings of the Mulwaree River and surrounding heritage properties, are acknowledged and sustained for future generations.
