

Western Harbour Tunnel and Beaches Link - geotechnical investigations from Monday 11 December 2017

The NSW Government is funding preferred route investigations including geotechnical testing for the Western Harbour Tunnel and Beaches Link.

Roads and Maritime Services carries out geotechnical testing to gather information about underground rock and soil conditions across a broad area. Data from this work will be used to inform the engineering design, final costings and a construction timeline.

A site identified by our geologists for test drilling is on Elliot Street, North Sydney. This will be established within the area shown on the map over the page.

Work is proposed to start from Monday 11 December 2017 and will take up to two weeks to complete. Once developed, water quality samples will be taken from the groundwater well each month for six months followed by two quarterly samples. The sampling regime is expected to be completed by December 2018.

The work will take place between **7am** and **6pm Monday to Friday** and between **8am** and **1pm** on **Saturday**. There will be no work at night, on Sundays or on public holidays.

A temporary work site with safety fencing will be established to ensure community safety. When the work is completed, the hole will be filled in and the test site restored to its previous condition.

How will the work affect you?

Appropriate site controls will be in place including traffic controls if required. If traffic controls are required, please observe all signage and follow instructions of traffic controllers.

There may be some noise associated with this work. We will minimise disturbance to the local community and operate in an environmentally sensitive and sustainable manner.

The location of these tests does not indicate a possible alignment and the work is designed to gather data about rock strata and conditions deep below ground.

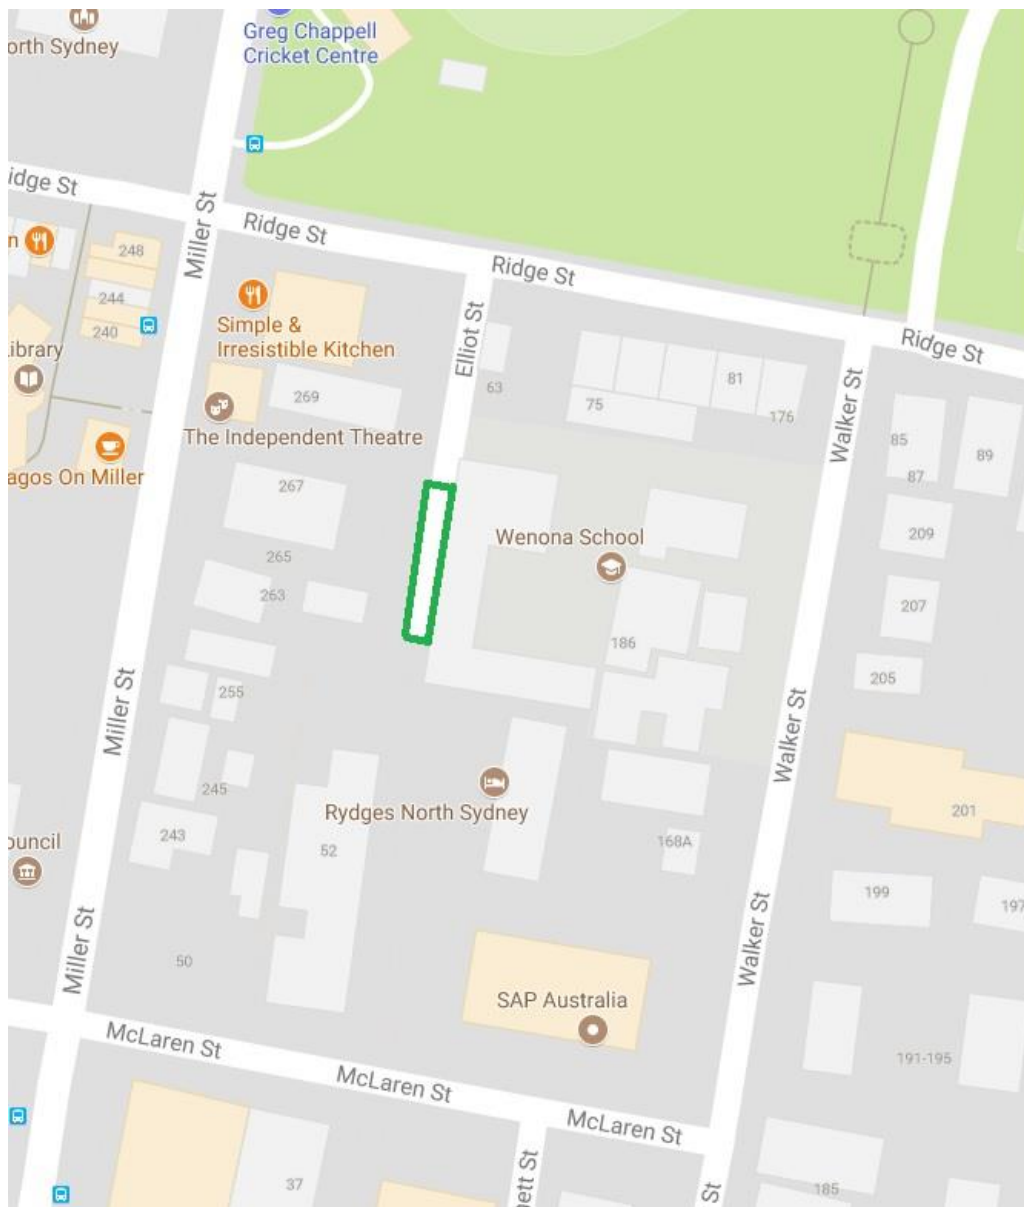

Geotechnical testing involves drilling small diameter holes (about the size of an orange) to extract rock samples used for scientific testing and analysis. Equipment will include a self-propelled drilling rig, support equipment as well as various hand tools.

Contact

If you have any questions please contact our project team on 1800 931 189 during office hours (8.30am to 5pm Monday to Friday) or whtbl@rms.nsw.gov.au. Thank you for your patience during this important work.
